Comments

[REDACTED] received a copy of the project notice and wanted to confirm the study area, as she lives on [REDACTED] north of County Road 42. Based on a review of the study area map, we determined that she is immediately outside the project study area. She also wanted to know where the turbines would be going, and I informed her that the location of turbines is still being determined. She had no further questions.

Subject: RE: Belle River Wind Project

Dear [REDACTED]

Thank you for your message. Although there are many factors affecting the need for new energy projects, ultimately the responsibility falls on the Government of Ontario for setting the appropriate policy on energy procurement in the short term and long term. We recommend the following link in order to gather additional information on the true impact of green energy to rate payers: <http://windfacts.ca/affordable-power>
Another valuable resource is Ontario's long term energy plan, which is also available here: <http://www.energy.gov.on.ca/en/ltep/>

If there are any questions related to the proposed project itself, we would be pleased to provide answers, particularly as the project develops. The first open house event will be held on Tuesday, September 23rd from 5 - 8 pm at the Knights of Columbus Club located at 1303 County Road 22 RR #3 in Belle River - we look forward to seeing you there.

Best regards,

Pat Murray

Subject: Belle River Wind Project

Based on data provided by independent sources and Ontario Power Generation, we currently have a surplus of power generated by both nuclear and green power. This has resulted in the selling of surplus power at a loss on the open market. In addition, residential rates have climbed to near on-peak levels based on the rates being paid for green energy. As the general public has done such a good job in reducing consumption you would think rates would be reduced but not so.

We are still bearing the burden of debt reduction as unilaterally decided by the former Premier of Ontario and now pay rates exceeding the open market. In my mind, we need no more wind projects until we require the power and can afford the capital costs to build a project. Fixed income Ontarians are being squeezed out of the homes by excessively high rates for power and water and we need to realize it is not sustainable.

Providing a method to store the unneeded power is an option, however, the cost is still not justifiable. I wonder just how this project is being sold as an absolute necessity. Making money off the back of taxpayers

needs to stop.

A plan to reduce our costs is more rational. Show us the money.

Comments

██████████ received a copy of the project notice as he lives in the Cooper's Mill retirement community, which is a new development of approximately 130 units just north of the rail tracks and east of the river in Belle River. He wanted to know how close the turbines would be to his house, as he is concerned about the aesthetics of turbines and the effect on his property values. I informed him that the location of turbines is still being determined; furthermore the Ministry (MOECC) regulations prevent turbines from being any closer than 550 m away from non-participating residents and the turbines must also meet the 40 dB threshold at 6 m/s.

He is not happy about having turbines near him but did not have any further questions. I invited him to attend the open house.

Subject: RE: Sept 23/14 public meeting

Hi [REDACTED]

Thank you for your e-mail. The September 23 meeting will be held as an open house, so there is no formal presentation. Jody, Brian, and I, along with a number of other members of the project team, will be present to discuss the display panels with you and to answer any questions you have.

I also followed up with Adam Wright and I understand that you left him a voicemail. Our team is looking to conduct a field survey of the natural heritage features on your property for the purpose of this project. The survey would be conducted on foot (no motorized vehicles would be used) and during daytime hours only. If you have any further concerns about granting our ecologists access to your property for this purpose, please let us know.

I look forward to meeting you on September 23.

Thanks,
Marc

Hi Jody, Brian & Marc,

Wondering if you can explain the format of the Sept 23 meeting. I received notice of this meeting which states its from 5-8pm. I assume that this means we can come anytime and ask questions. Wondering if there will be a presentation at a specific time? I have a number of concerns with this project and would definitely like to discuss more.

I receive a voice mail message today from an Adam Wright?? wanting to access our property for a possible location of a windmill.

thanks for your time

Subject: Public meeting Sept 23

I am a resident of Coopers Mill in Belle River and unable to attend the information meeting. I would like to know if the parcel of land which is bordered north at the tracks [REDACTED] and [REDACTED] is included in this project. If this said parcel is included I am strongly against that parcel being used. This is adjacent to 120 townhomes which are geared to over 50 also many more residential homes. I feel the proximity is too close to that number of homes. Our health and our residential values will be greatly

affected.

If you could reply to let me know if this parcel of land is included it would be appreciated.

Thankyou

Belle River Ont.

Dear [REDACTED]

Thank you for your email.

In short, the reason is because our proposed project is planned for connection to the Transmission system, whereas your solar rooftop project connects to the local distribution grid.

The distribution lines have different constraints from the Transmission system. The Transmission system also has constraints, and our proposed project has to go through a technical connection and system impact assessment.

We can go into greater detail at our open house. The first open house event will be held on Tuesday, September 23rd from 5 - 8 pm at the Knights of Columbus Club located at 1303 County Road 22 RR #3 in Belle River.

We look forward to seeing you there,

Comments

██████████ left a message on my voicemail expressing his strong concern regarding the turbine locations (there are several in the vicinity of his house) and what he felt was poor notification regarding the public meeting. When I phoned ██████████ back, he raised these issues again and mentioned property values (he built a house 10 years ago on a 2 acre plot at the front of a farmer's field), and the visual and noise impacts from the turbines.

Regarding notification, he acknowledged receiving the envelope with the public meeting notice but did not realize that it was for a wind project. I indicated that we would design future envelopes to be clearer about the importance of opening the notice and who the notice was from.

██████████ also raised the impacts of the project on migratory birds. He referenced the Jack Miner Migratory Bird sanctuary (which is in Kingsville) and indicated that he had a permitted bird sanctuary on his property. He was concerned that geese and other birds would be driven away by the turbines, as he believes has happened with the existing wind projects in the area.

██████████ indicated that he would likely seek to retain legal counsel to oppose this project and asked how he can oppose it. I explained the ERT process to ██████████

At the end of the call, he thanked me for phoning him back.

Hi [REDACTED]

Thanks for your email and interest in our project.

At this time, we do not intend to run our transmission line down County Rd 31 north of 401. However, as we are still early in our development, this can change if our preferred route(s) prove impossible or unfeasible for construction. Having said this, we do want to avoid County Rd 31 north of the 401 as much as possible.

Hope that helps,
Jody

Subject: Belle River Wind Project

Good Morning Jody,

I received your email address from the contact information in the "Draft Project Description Report" for the Belle River Wind Project.

I have been anxiously awaiting the next update for the project and I'm hoping that you could help me since we are in the 1st quarter of 2015.

My husband and I are interested in purchasing property on County Rd 31, just North of Highway 401. However, we have put our offer on hold since we were informed that the transmission lines may be running down County Rd 31 to the new sub station. I completely understand that a report has not been made public, but are you able to confirm that this information is/isn't accurate?

Any assistance you could provide would be greatly appreciated.

Sincerely,

[REDACTED]

Subject: wind turbines lots 7 & 8?

To Whom It May Concern,

I have been away for the past couple of months but I recently had the occasion to examine the Notice of Draft Site Plan which was recently distributed.

According to this draft site plan it would appear that the two turbines intended to be erected on [REDACTED] and [REDACTED] farm on Lots [REDACTED] and [REDACTED] (bordered by Myers Rd. and the Belle River Rd. and just south of Hwy. 42) either had been mistakenly omitted or withdrawn.

As a matter of interest, if it has been indeed decided to no longer erect these turbines at this time on this property, I'd be interested to know what factors have led to this decision.

Is there any possibility of reinstatement or is this decision final?

Thank you for your kind attention in this matter. Hoping to hear from you soon.

Sincerely,

[REDACTED]

until March 28th.

Subject: RE: Wind

Hi [REDACTED]

Thank you for contacting the Belle River Wind Project team. We acknowledge your concerns about property values. As you know, there are a wide variety of factors that influence property values. In the case of wind turbines, numerous studies have demonstrated that proximity to a wind farm does not have a negative impact on property values. These studies include:

- Vyn, R., and McCullough, R. (September 2014). The Effects of Wind Turbines on Property Values in Ontario: Does Public Perception Match Empirical Evidence? Canadian Journal of Agricultural Economics: Pages 365-392.
- MPAC News Summer 2012 (<http://www.mpac.ca/pdf/MPACNewsSummer2012.pdf>) which notes that property values have continued to increase in Ontario in many areas where wind projects either exist or are proposed for development. In the County of Huron, for example, residential property values increased by an average of approximately 14.8% since 2008; farmland has increased by approximately 65.3% since 2008.
- Canning, G., and L.J. Simmons. (February 2010). Wind Energy Study Effect of Real Estate Values in the Municipality of Chatham-Kent. Canning Consultants Inc. & Prepared for the Canadian Wind Energy Association.
- Hoen, B., Wiser, R., Cappers, P., Thayer, M., and G. Sethi. (December 2009). The Impact of Wind Power Projects on Residential Property Values in the United States: A Multi- Hedonic Analysis. Ernest Orlando Lawrence Berkeley National Laboratory. Prepared for the Office of Energy Efficiency and Renewable Energy.

Subject: RE: notice of draft plan

Hi [REDACTED]

Thank you for contacting the Belle River Wind Project team. Up to 50 turbines and associated infrastructure are being assessed for the Project. However, if approved, up to 44 turbines will be constructed, depending on the nominal rating of each turbine (or the amount of power generated by each turbine). Each "x" on the map represents a proposed turbine.

Visual effects are ultimately dependent on the perception of residents and visitors to the presence of turbines. The Project is committed to an overall net benefit to the community and province through community involvement, providing increases the municipal property tax base and increasing Ontario's renewable energy supply.

Thanks

Subject: notice of draft plan

Just received in the mail the info on the draft site plan. No where on this paper does it list or mention the number of windmills.

It mentions the capabilities of up to 100 MW. Most residents just want to know...How many more of these "eyesores" will we be subjected to seeing day and night.

You are probably not a country resident but you should sit out at night after the stars come out and look south towards the existing windmills and see a sea of flashing red lights going systematically pulsing on and off. It is not a pleasing or calming sight!

Under the legend there is "turbine location". Would this be the specifics regarding total number of windmills. (just add up the x's?)

thankyou for your info

Subject: RE: Belle River Wind comments

Hi [REDACTED]

Thank you for contacting the Belle River Wind Project team.

Through the Green Energy Act, Ontario has made a commitment to diversify its electricity generation, removing the need to rely on any single source. Energy from nuclear, wind, solar and hydro power are all a part of Ontario's energy future. Wind power can complement the provincial base load generation and create a more stable and reliable electrical grid. Wind power is intended to be part of the long-term energy supply plan for the province of Ontario, which accounts for forecasted supply and demand in the years to come. To review the Government of Ontario's Long-Term Energy Plan, please visit the Ontario Ministry of Energy's website: <http://www.energy.gov.on.ca/en/>.

The cost of new energy generation, such as wind, cannot be directly compared to existing generation, such as coal and hydro, as capital costs of existing facilities were financed and accounted for years ago. Further, due to historical subsidization, the cost of generating and delivering electricity to consumers was much lower. However, government agencies are in the process of adjusting the fee structure to more accurately reflect the true cost of energy production.

The true cost of generation for each energy technology varies greatly and cannot be compared to one another on a single price. The cost of generating wind power once turbines are installed will remain steady for decades as the fuel – wind – is free. Alternatively, regulations to make polluters pay for their emissions will mean that the cost of power from fossil fuels will continue to rise, on top of normal market fluctuations.

Once complete, the Belle River Wind Project is expected to produce clean and renewable energy equal to the electricity needs of more than 50,000 Ontario homes and generate approximately \$290,000 annually for the Town of Lakeshore, Essex County and local schools, in addition to creating lasting benefits through a Community Benefits Program.

Belle River Wind will contribute to economic development in the Lakeshore region, including the creation of jobs, the strong capital infusion from tax and royalty payments, and the economic ripple effect resulting from the Project.

Thanks

Subject: Belle River Wind comments

Hello, I am a resident of Lakeshore and received your mail today. I want to start off by saying this project is a terrible idea. This was purposed by the lying Liberal Party. This entire idea has already been proven to be a complete waste of money, as wind power is far more expensive to produce then what it generates, hence the reason why all of Europe has abandoned all their wind programs. We are selling our power to the USA for a net loss, what other business would thrive with no profits? Why are we continuing to expand this project? Are you trying to bankrupt our province? Please stop this project immediately. Tax money can be spent elsewhere and be far more useful. These Liberal projects are single handily ruining Ontario and creating more and more debt!

To: [REDACTED]
Subject: RE: Turbines

Hi [REDACTED]

Thank you for contacting the Belle River Wind Project team. We acknowledge your concerns about property values. As you know, there are a wide variety of factors that influence property values. In the case of wind turbines, numerous studies have demonstrated that proximity to a wind farm does not have a negative impact on property values. These studies include:

- Vyn, R., and McCullough, R. (September 2014). The Effects of Wind Turbines on Property Values in Ontario: Does Public Perception Match Empirical Evidence? Canadian Journal of Agricultural Economics: Pages 365-392.
- MPAC News Summer 2012 (<http://www.mpac.ca/pdf/MPACNewsSummer2012.pdf>) which notes that property values have continued to increase in Ontario in many areas where wind projects either exist or are proposed for development. In the County of Huron, for example, residential property values increased by an average of approximately 14.8% since 2008; farmland has increased by approximately 65.3% since 2008.
- Canning, G., and L.J. Simmons. (February 2010). Wind Energy Study Effect of Real Estate Values in the Municipality of Chatham-Kent. Canning Consultants Inc. & Prepared for the Canadian Wind Energy Association.
- Hoen, B., Wiser, R., Cappers, P., Thayer, M., and G. Sethi. (December 2009). The Impact of Wind Power Projects on Residential Property Values in the United States: A Multi- Hedonic Analysis. Ernest Orlando Lawrence Berkeley National Laboratory. Prepared for the Office of Energy Efficiency and Renewable Energy.

Regarding noise, the Ministry of the Environment and Climate Change (MOECC) has established guidelines to protect public health and safety which prescribe setback distances and permissible sound levels near receptors. The Project will be designed to be in compliance with noise requirements of Ontario Regulation (O. Reg.) 359/09 which requires a minimum setback distance of 550 metres between a turbine and a non-participating landowner's residence with background sound levels not exceeding 40 decibels at wind speeds of 6 metres per second.

In terms of potential effects on wildlife, the Natural Heritage Assessment was submitted for review to the Ministry of Natural Resources and Forestry (MNRF). The Natural Heritage Assessment identifies potential impacts and recommends appropriate mitigation measures to avoid potential significant or long-term effects on wildlife and their habitat. Natural heritage requirements described in Sections 23 through 28 of O. Reg. 359/09 were followed when preparing the Natural Heritage Assessment and the subsequent environmental effects monitoring plan. Information on wildlife and their habitat was obtained through field studies as well as interviews with agencies and environmental organizations.

Vibration from the Project will only be limited to construction activities which will be short-term and localized. Therefore, no long-term potential effects are anticipated.

Following the anticipated 20 year operational phase of the Project, the Project's lifespan may be extended or it may be decommissioned depending on an economic evaluation at the time. If Belle River Wind makes the decision to decommission the Project, lands will be restored so that pre-existing land use (i.e., agriculture) can continue. Decommissioning will involve removing the wind turbine structures to the base of the foundation and

excavating and backfilling the area with subsoil and topsoil. Any financial burden associated with the decommissioning of turbines is the sole responsibility of Belle River Wind.

Once complete, the Belle River Wind Project is expected to produce clean and renewable energy equal to the electricity needs of more than 50,000 Ontario homes and generate approximately \$290,000 annually for the Town of Lakeshore, Essex County and local schools, in addition to creating lasting benefits through a Community Benefits Program.

Thanks

To: Belle River Wind
Subject: Turbines

I disagree with the plan to put wind turbines around the Belle River area. I think the township is taking dollars today but decreasing our future.

The wind turbines are unsightly, decrease property values and cause noise pollution (even a small amount of noise is more than we need). Belle River Wind says they have done studies on the effect of wildlife but I don't think they have been around long enough to have conclusive determinations. The turbine itself would act like an earth quake. Even the worms would move away from the constant turbulence and then the farm field around the turbine would become barren. How far would that extend?

At a meeting at the Knights of Columbus I asked how long they are supposed to last and was told 15 years. I asked what would happen then and they said they would have to be refurbished or dismantled. They indicated that the unit itself would have enough recyclable components to pay for its disassembly. That does not take all the cement out of the farm field. It then lead to the question - "Would Belle River Wind be responsible to do the dismantling or refurbishing?" and they replied they would if they were still in operation.

The first wind turbines were put in the English channel but those have not yet reached their end of term. It has not yet been determined if they will be kept operational or if they will be dismantled.

It seems that Belle River Wind was incorporated to make quick easy money from the government but that there is no guarantee that they will be in business to support their constructions and ensure that the towers were built strong enough and safe enough to even last 15 years.

The financial numbers quoted at the public meeting indicate that the government is investing a large amount of our tax dollars on this project with little to NO foreseeable return on that investment.

Please don't help them throw away more of our tax dollars.

Comments

I phoned [REDACTED] back after she left a voicemail on my office phone and cell phone. She is very angry about the project and is concerned primarily with increasing hydro rates and the impact of this and other wind projects on her rates. She believes these projects are unnecessary as Ontario is selling surplus power to the US.

[REDACTED] lives on [REDACTED] (at [REDACTED]), and is also concerned about the number of turbines that are proposed south of Highway 42. She does not want to see more turbine lighting and feels that the turbines are too close to her house. She has lived in the area her entire life ([REDACTED] is named after her family, which owned [REDACTED] for many years) and feels that the area has changed too dramatically.

[REDACTED] promised to show up at the public meeting in May and be very vocal about her displeasure for the project. I told her that I would be pleased to answer any questions she may have in advance of the meeting.

Subject: FW: Notice of Draft Site Plan for Belle River Wind Project

Hi [REDACTED]

Thank you for contacting the Belle River Wind Project team. We acknowledge your concerns with regards to health. Many studies have been conducted world-wide to examine the relationship between wind turbines and possible human health effects. Overall, health and medical agencies agree that when sited properly, wind turbines are not causally related to adverse health effects. Some examples of such reports include: Chatham-Kent Public Health Unit, 2008; Australian Government, National Health and Medical Research Council, 2010; Australian Government, 2011; Massachusetts Department of Environmental Protection (MassDEP) and Massachusetts Department of Public Health (MDPH), 2012. Most recently, Health Canada published a study on November 6, 2014 that determined noise from wind turbines did not have any measurable effect on illness and chronic disease, stress, quality of sleep or overall quality of life. The findings from the Health Canada study and field research are consistent with a recent report commissioned through the Massachusetts Institute of Technology (MIT) which provides one of the most comprehensive and multidisciplinary reviews of the scientific literature on wind turbines and human health to date. The MIT paper, entitled "Wind Turbines and Health: A Critical Review of the Scientific Literature" concludes that the levels of infrasound at customary setback distances are typically below audibility, there is no clear or consistent association between noise and health, infrasound and low frequency sound do not present health risks, and noise plays a minor role in comparison with other factors in leading people to report annoyance.

Belle River Wind is committed to an overall net benefit to the community and province through community involvement, providing increases the municipal property tax base and increasing Ontario's renewable energy supply.

At the Regular Council Meeting on May 13, 2014, the Town of Lakeshore passed a resolution supporting the construction and operation of the Belle River Wind Project.

We will be hosting our second public meeting on Wednesday May 20, 2015 from 5:00 pm to 8:00 pm at the Atlas Tube Centre, Renaud Room, 447 Renaud Line Road in Belle River. At that time you will be able to review the draft project layout and speak to the Belle River Wind team. Please sign up on the project website to stay informed of project news including the final layout: <http://www.belleriverwind.com/get-connected/>.

Thank you for including me on this email. As always we disagree with the increase of any additional wind turbines. We have them surrounding our home and continue to experience negative side effects. My family has been part of a health study where they continue to monitor the side effects.

These wind turbines should be installed in rural areas where there are no homes not in Essex County. We also feel they are visual pollution and continue to voice our concerns, however, it seems these wind turbines companies only care about the financial benefits and not the impact of the residents who reside around them. It is also my understanding that council does not support any increase in wind turbines as they are representing the tax payers.

please reconsider your decision to move forward with this plan. It only benefits those who are impacted financially.

Sincerely

Subject: Notice of Draft Site Plan for Belle River Wind Project

Good afternoon,

You are receiving this email because you requested that we provide you with public notifications for the Belle River Wind Project ("the Project") via email at the first public open house.

Last week, a public notice was distributed regarding the **Draft Site Plan and Noise Impact Assessment** for the Belle River Wind Project. To review a copy of the notice, please use the following link:

http://belleriverwind.com/files/8614/2586/6419/Public_Note_-_Draft_Site_Plan_for_Belle_River_Wind_Project_3_4_2014.pdf.

The Draft Site Plan has been prepared to identify and describe the location of key Project components, including wind turbines and the collector substation. The Noise Impact Assessment has been prepared to demonstrate that the placement of turbines and the collector substation complies with the MOECC's 2008 publication entitled "Noise Guidelines for Wind Farms".

Copies of the Draft Site Plan and Noise Impact Assessment were made available for public review starting on March 9, 2015, at the Town of Lakeshore Municipal Office (419 Notre Dame Street, Belle River), County of Essex Municipal Office (360 Fairview Avenue West, Essex) and the Lakeshore Branch of the Essex County Library System (447 Renaud Line Road, Belle River). The report is also available for public review online at: www.belleriverwind.com.

If you wish to be removed from the project contact list, [please click the following link](#).

Sincerely,

Marc Rose, Consultant Project Manager
On behalf of the Belle River Wind Project Team

Hi [REDACTED]

Thank you for your interest in the Belle River Wind Project. We are always encouraged and happy to hear from supportive folks in the community.

We acknowledge your comment on the format of the Public Meeting; however, an open house format was selected because it allows attendees to process Project information at their own pace. This format also provides opportunities for one-on-one conversations with members of the Project team.

Throughout the Renewable Energy Approval process for the Belle River Wind Project, the public were able to provide their input at the first Public Meeting and by submitting their questions and comments to the Project team by email, regular mail or telephone call. The second Public Meeting that will be held on May 20, 2015 from 5:00 pm to 8:00 pm at the Atlas Tube Centre, Renaud Room, 447 Renaud Line Road in Belle River.

The Consultation Report that will be submitted as part of the Renewable Energy Approval application will contain the feedback we have received from the public and how those questions and comments have been considered during the planning of the Project.

We look forward to seeing you again at the second Public Meeting on May 20, 2015.

see attached comments .. sorry for the poor writing ... I type better than I write. If you need clarification re; any comments, please email me at [REDACTED]

I am a supporter of wind turbines, but am alone amongst most my friends here. One comment I heard from many was that they feel these meetings are a joke as they in effect, have little chance of making any impact on your plans. Plans are in the works and their opinions will have little effect. As mentioned in my notes, a better forum would have been your expert panel at the front answering questions .. the meeting format used on the 23rd was not favourable to getting questions answered to the benefit of the whole crowd.. everyone's questions were pretty much the same so why not have a panel discussion so everyone could hear the same

answers. Your people circulating could not answer a number of the questions put to them but an expert panel should have been able to convey a sense of expertise.

Subject: RE: 75 wind turbines

Hi [REDACTED]

Thank you for your interest in the Belle River Wind Project.

Belle River Wind is proposing to build 44 wind turbines with an installed capacity up to 100 MW.

With regards to your point that the construction of the turbines will increase hydro rates, a study conducted by Tim Weis and P.J. Partington titled "Behind the Switch: Pricing Ontario Electricity Options" (2011) indicates that the Green Energy Act has little or no impact to Ontario ratepayers. The reasons behind this conclusion were that currently planned renewable resources would have to be replaced with other options which would likely work out to be more polluting, less sustainable and in the long-term more expensive. Another important point raised in this study is the increased cost of continuing to use coal plants, notably the health care system. Further discussion about this study with Julia Kilpatrick (2011) as well as a link to the study itself is available at: www.pembina.org/blog/556.

The MOECC has established guidelines to protect public health and safety which prescribe setback distances and permissible sound levels near receptors. The Project will be designed to be in compliance with noise requirements of Ontario Regulation 359/09. The regulation requires a minimum setback distance of 550 metres between a turbine and a non-participating landowner's residence with background sound levels not exceeding 40 decibels at the residence at wind speeds of 6 metres per second.

We will be hosting our second public meeting on Wednesday May 20, 2015 from 5:00 pm to 8:00 pm at the Atlas Tube Centre, Renaud Room, 447 Renaud Line Road in Belle River. At that time you will be able to review the draft project layout and speak to the Belle River Wind team.

Subject: 75 wind turbines

Sept 22, 2014

To whom it may concern,

I am opposed to the construction of the 75 wind turbines in the town of lakeshore. We have enough wind turbines as it is in our area.

The cost of construction for these turbines will eventually rise our hydro bills, as it is already happening with those that are already built. It will be unaffordable to have hydro and will cause undue hardship for retirees and the general public.

Also, the building of these turbines close to residential homes, the swooshing sounds that is emitted affects the people living near to them.

I absolutely do not want any additional wind turbines in our area.

A concerned resident,

[REDACTED]

Subject: RE: Belle River Wind Project

Hi [REDACTED],

Thank you for contacting the Belle River Wind Project team.

Through the Green Energy Act, Ontario has made a commitment to diversify its electricity generation. Energy from nuclear, wind, solar and hydro power are all a part of Ontario's energy future. Wind power can complement the provincial base load generation and create a more stable and reliable electrical grid. Wind power is intended to be part of the long-term energy supply plan for the province of Ontario, which accounts for forecasted supply and demand in the years to come. To review the Government of Ontario's Long-Term Energy Plan, please visit the Ontario Ministry of Energy's website: <http://www.energy.gov.on.ca/en/>.

The Town of Lakeshore Council has provided two resolutions endorsing the Project. These resolutions were made prior to the December 9, 2014 resolution to pass a moratorium on wind turbines. The December 9, 2014 resolution states that the moratorium will be on wind turbine projects that are not already supported by Council. As the planning process continues, Belle River Wind will continue to consult with both the Town of Lakeshore and County of Essex.

Sincerely,

Pat Murray

Subject: Belle River Wind Project

Jody Law, Brian Edwards, and Marc Rose,

Although I was unable to attend the scheduled public meeting held last night, I would like it to be known that I am totally against the completion of this project. I am a long time resident of Woodslee and am currently surrounded by wind turbines. The negative effects of these turbines are too multiple to list here and I am astounded by the number of turbines that are projected to be placed within the Belle River Wind

Project. I cannot believe the government and the surrounding residents would allow this continue, what happened to the moratorium on wind turbines??

Sincerely,

A solid black rectangular box used to redact the signature of the sender.

Subject: Help locating information

Hello sir,

My name is [REDACTED]. I am a resident of Belle River and am hoping you might be able to help me locate some information associated with your company. Golder Associates was asked to do an assessment for Belle River Wind for the turbines going up in the area. As a citizen interested in the project in my neighbourhood, I was directed to Belle River Wind's website where I was able to read information related to the project. Golder Associates produced some maps of the areas for the report. They have been placed into the documents online but I was hoping to obtain a hardcopy of some of these maps. Would you be able to direct me to the people who may be able to help me in my request? The maps online are survey maps.

Any help would be greatly appreciated.

I look forward to hearing from you,

[REDACTED]
