Statement of Qualifications and Limitations

The attached Report (the "Report") has been prepared by AECOM Canada Ltd. ("AECOM") for the benefit of the Client ("Client") in accordance with the agreement between AECOM and Client, including the scope of work detailed therein (the "Agreement").

The information, data, recommendations and conclusions contained in the Report (collectively, the "Information"):

- is subject to the scope, schedule, and other constraints and limitations in the Agreement and the qualifications contained in the Report (the "Limitations");
- represents AECOM's professional judgement in light of the Limitations and industry standards for the preparation of similar reports;
- may be based on information provided to AECOM which has not been independently verified;
- has not been updated since the date of issuance of the Report and its accuracy is limited to the time period and circumstances in which it was collected, processed, made or issued;
- must be read as a whole and sections thereof should not be read out of such context;
- was prepared for the specific purposes described in the Report and the Agreement; and
- in the case of subsurface, environmental or geotechnical conditions, may be based on limited testing and on the assumption that such conditions are uniform and not variable either geographically or over time.

AECOM shall be entitled to rely upon the accuracy and completeness of information that was provided to it and has no obligation to update such information. AECOM accepts no responsibility for any events or circumstances that may have occurred since the date on which the Report was prepared and, in the case of subsurface, environmental or geotechnical conditions, is not responsible for any variability in such conditions, geographically or over time.

AECOM agrees that the Report represents its professional judgement as described above and that the Information has been prepared for the specific purpose and use described in the Report and the Agreement, but AECOM makes no other representations, or any guarantees or warranties whatsoever, whether express or implied, with respect to the Report, the Information or any part thereof.

Without in any way limiting the generality of the foregoing, any estimates or opinions regarding probable construction costs or construction schedule provided by AECOM represent AECOM's professional judgement in light of its experience and the knowledge and information available to it at the time of preparation. Since AECOM has no control over market or economic conditions, prices for construction labour, equipment or materials or bidding procedures, AECOM, its directors, officers and employees are not able to, nor do they, make any representations, warranties or guarantees whatsoever, whether express or implied, with respect to such estimates or opinions, or their variance from actual construction costs or schedules, and accept no responsibility for any loss or damage arising therefrom or in any way related thereto. Persons relying on such estimates or opinions do so at their own risk.

Except (1) as agreed to in writing by AECOM and Client; (2) as required by-law; or (3) to the extent used by governmental reviewing agencies for the purpose of obtaining permits or approvals, the Report and the Information may be used and relied upon only by Client.

AECOM accepts no responsibility, and denies any liability whatsoever, to parties other than Client who may obtain access to the Report or the Information for any injury, loss or damage suffered by such parties arising from their use of, reliance upon, or decisions or actions based on the Report or any of the Information ("improper use of the Report"), except to the extent those parties have obtained the prior written consent of AECOM to use and rely upon the Report and the Information. Any injury, loss or damages arising from improper use of the Report shall be borne by the party making such use.

This Statement of Qualifications and Limitations is attached to and forms part of the Report and any use of the Report is subject to the terms hereof.

1. Introduction

1.1 **Project Description**

North Kent Wind 1 LP (North Kent Wind 1), a joint venture limited partnership owned by affiliates of Pattern Renewable Holdings Canada ULC (Pattern Development) and Samsung Renewable Energy Inc. (Samsung Renewable Energy), is constructing a Class 4 wind facility called the North Kent Wind 1 Project (the "Project") in the Municipality of Chatham-Kent, Ontario. The Project will be located on both public and private lands and is generally bounded by Oldfield Line to the north, Bear Line road to the west, Pioneer Line and Pine Line/Darrell Line to the south and Centre Side road and Caledonia Road to the east (**Figure 1**).

The Project will use wind to generate energy through the use of commercial wind turbine technology capable of producing up to 100 MW. Approximately 45 turbine locations are currently being assessed for the Project. The total number of turbines will depend on the nominal rating of each turbine. To facilitate the construction of the proposed Project, a number of permanent and temporary construction components are required, which include:

- Wind Turbine Generators;
- Pad-mounted Transformers;
- Wind Turbine Access Roads;
- Collector Lines;
- Collector Substation;
- Microwave Tower;
- Meteorological Towers;
- Interconnection Station;
- Operation and Maintenance Building; and
- Temporary Crane Pads and Construction Staging Area

1.2 Project Boundary

This *Protocol for Management and Resolution of Claims Related to Private Well Interference* is to be followed for any wells or well water from an owner of an active water well (i) within the Project Study Area; or (ii) outside of the Project Study area and located within 1 km from each individual Equipment and meteorological tower, the microwave tower, and the operations & maintenance building, referred herein as the Project Boundary (**Figure 1**).

2. Purpose

In accordance with the Environmental Protection Act (Section 47.4), Renewable Energy Approval (REA) No. 5272-A9FHRL was received for the Project from the Ministry of Environment and Climate Change (MOECC) on June 29, 2016. Pursuant to Condition G7 of the REA, a Project specific contingency plan detailing the procedure and protocol to manage private well interference claims due to construction, operation and decommissioning of the Project is required. The contingency plan shall at a minimum include a sequence of remedial measures to be undertaken by North Kent Wind 1 to resolve any impacts to wells or well water resulting from the construction, operation or decommissioning of the Project.

The following is an excerpt from the REA that provides general conditions for well interference:

- G5. Should the Company receive a complaint about wells or well water from an owner of an active water well (i) within the Project Study Area; or (ii) outside of the Project Study area and located within 1 km from each individual Equipment and meteorological tower, the microwave tower, and the operations & maintenance building, the Company shall retain a qualified expert (P.Eng or P.Geo) to immediately undertake the following:
 - (1) collect a water well sample at the complainant's water well, prior to any treatment systems ("raw"), after allowing the distribution system to flow for approximately 5 minutes and submit the water sample to a qualified laboratory for an analysis of the general chemistry suite of water quality parameters identified in Condition G3;
 - (2) compare the results of the analysis of the water sample noted in Condition G5(1) to the pre-construction water sampling analysis results noted in Condition G3 for the subject well (if a pre-construction water sample at the subject well was taken); and
 - (3) Provide a detailed written opinion as to whether the water sampling analysis results demonstrate that the construction, operation or decommissioning of the Facility caused or may have caused an adverse effect to the well's water supply.
- G6. Pursuant to Condition G5(3), if the qualified expert (P.Eng or P.Geo) determines that the construction, operation or decommissioning of the Facility caused or may have caused an adverse effect to a complainant's well or well water, the Company shall undertake the following measures, at the Company's expense:
 - (1) immediately provide an adequate quantity of bottled water to the impacted party until such time that the issue has been resolved;
 - (2) immediately retain a qualified expert (P.Eng or P.Geo) to investigate and provide an opinion regarding the specific cause of the impact to the well or well water. The qualified expert shall consider the results of the ground-borne vibration monitoring described in Condition H1 in developing his/her opinion; and
 - (3) immediately implement the contingency plan described in Condition G7.
- G7. Prior to the commencement of the construction of the Facility, the Company shall retain a qualified expert (P.Eng. or P.Geo.) to establish a contingency plan. The contingency plan shall, at a minimum, include a sequence of remedial measures to be undertaken by the Company, at the Company's expense, to resolve any impacts to wells or well water resulting from the construction, operation, or decommissioning of the Facility.

- G8. The Company shall notify the District Manager, in writing, within one (1) business day of receiving a complaint pursuant to Condition G5. The written notification shall include a description of actions to be undertaken by the Company to resolve the complaint received.
- G9. The Company shall create written records of all pre-construction water sampling activities and analyses of results undertaken in accordance with Conditions G1 to G3, all complaints received pursuant to Condition G5, and all investigative and remedial actions undertaken in accordance with Conditions G5 to G7 to resolve complaints regarding wells or well water. The Company shall retain these records for the life of the Facility, and shall make them available for inspection by the Ministry, upon request.
- G10. The Company shall consult with and follow any directions provided by the Director and/or District Manager in respect of measures to be implemented by the Company to investigate and resolve public complaints received by the Ministry or the Company regarding potential impacts of the construction, operation or decommissioning of the Facility to wells or well water.

North Kent Wind 1 is responsible to ensure all well interference confirmed to be caused by construction, operation or decommissioning of the Facility within the defined Project boundaries is fairly and consistently remedied. This document has been prepared to provide a Project procedure and protocol to manage private well interference claims within the defined project area due to construction, operation and decommissioning of the Project.

3. Well Complaint Process and Remediation Procedure

The following well complaint process and remediation procedure was developed to ensure that property owners within the Project Boundary are not deprived of a potable supply of water as a result of Project activities. The Well Complaint Process and Remediation Procedure is summarized in the following sections below.

3.1 Notification Protocol

Property owners within the defined Project Boundary have been instructed to contact North Kent Wind 1 LP should they have questions or complaints regarding the Project at the following Primary Contact:

North Kent Wind 1 LP c/o Samsung Renewable Energy Inc. 2050 Derry Road West 2nd Floor Mississauga, ON L5N 0B9

Phone: Toll Free: (855) 780-3859 Email: *info@northkentwind.com*

The above phone and email address shall be monitored during regular business hours (Monday to Friday, 8:00 am to 5:00 pm).

In the event a complaint is received, the following procedure shall be implemented in a timely manner:

- 1. Upon receipt of a well complaint, either via a phone call to the Primary Contact, or in person to a staff member in the field, all information is to be collected in accordance with the *Complaint Response Procedure for Phone Calls* (Form A, Attachment 1).
- North Kent Wind 1 shall retain a qualified expert (P.Geo or P.Eng) within two (2) business days of receiving a well complaint to complete an investigation in accordance with the *Well Complaint Procedure for Site Investigation* (Form B, Attachment 2).
- 3. North Kent Wind 1 shall notify the MOECC District Manager, in writing, within one (1) business day of receiving a complaint. The written notification shall include a description of actions to be undertaken by the Company to resolve the complaint received.

3.2 Well Complaint Response Procedure

The reactive well mitigation procedure shall be implemented for any well complaints that may arise within the Project Boundary during construction, operation and decommissioning of the Project. All property owners with active water wells within the Project Boundary and who report well issues (quality and/or quantity impacts) will be included in the following well complaint response sequence:

A well complaint investigation will be conducted as per the Well Complaint Procedure for Site Investigation (Form B, Attachment 2) and a qualified expert (P.Geo or P.Eng) will undertake and/or oversee the following:

.

- collect a water well sample at the complainant's water well, prior to any treatment systems ("raw"), after allowing the distribution system to flow for approximately 5 minutes and submit the water sample to a qualified laboratory for an analysis of the general chemistry suite of water quality parameters, including the following:
 - Escherichia coli
 - Total Coliforms
 - Electrical Conductivity
 - pH
 - Total Hardness (as CaCO3)
 - Total Dissolved Solids
 - Total Suspended Solids
 - Alkalinity (as CaCO3)
- SulphateAmmonia as N

Nitrate as N

Nitrite as N

Fluoride

Chloride

Bromide

- Dissolved Organic Carbon
- Turbidity
- Calcium
- Magnesium
- Sodium
- Potassium
- Iron
- Manganese
- Colour
- compare the results of the analysis of the water sample to the pre-construction water sampling analysis results for the subject well (if a pre-construction water sample at the subject well was taken);
- 3. investigate and provide a professional opinion regarding the claimed impact to the well or well water. The qualified expert shall consider the results of the ground-borne vibration monitoring described in Condition H1 in developing his/her opinion; and
- 4. Provide a detailed written opinion as to whether the water sampling analysis results demonstrate that the construction, operation or decommissioning of the Facility caused or may have caused an adverse effect to the well's water supply.
- If the well issue is confirmed to be a result of Project activities, North Kent Wind 1 will provide a letter to the property owner explaining the outcome of the well investigation and detail the recommended remediation measures for the property owner's approval. A temporary water supply will be provided within 24-hours of receiving the recommendation and sustained for the duration of the proceeding remediation measures.
- If the well issue is found not to be a result of Project activities, North Kent Wind 1 will provide a letter to the property owner explaining the outcome of the well investigation and the rationale for the decision.

3.3 Remediation Procedure

In the event a well complaint is confirmed to be a result of Project activities, the recommended remediation measures will be implemented in a timely manner at the expense of North Kent Wind 1. The temporary water supply will be provided directly to the affected property and will be sustained at the expense of North Kent Wind 1 until the remediation efforts return the property owners water supply to a condition similar (or better than) baseline conditions. If the property owner did not participate in the pre-construction sampling program, and baseline conditions are unknown, the remediation measures shall provide the property owner with a water supply that meets Ontario Drinking Water Standards (ODWS) for those general chemical parameters listed in Condition G3 of the REA.

Remedial option will be evaluated by a qualified expert (P.Geo or P.Eng) with consultation with North Kent Wind 1, and will be dependent on the type of complaint received and private well and Project-specific information available

at the time of the well complaint investigation. Remedial measures that may be implemented could include one or a combination of the following:

- Lowering / replacement of the pump inlet within the property's existing well;
- Well and/or well system flushing / rehabilitation (chemical and/or mechanical methods) conducted by an MOECC licenced water well contractor;
- Installation of a well water treatment system by a licenced contractor;
- Construction of a new drilled well by a licenced well contractor; or
- Connection to a local watermain (where feasible).

3.4 Monitoring

Subsequent to the implementation of remediation measures, a follow-up water well sample shall be collected at the complainant's water well, both prior to any treatment systems ("raw") and after the installed treatment system ("treated"), if present, after allowing the distribution system to flow for approximately 5 minutes. The water sample will be submitted to a CALA-accredited environmental analytical laboratory for an analysis of the general chemistry suite of water quality parameters identified in Condition G3 of the REA and listed herein as part of Section 3.2(1). The results of the analysis of the water sample shall be compared to the pre-construction water sampling analysis results for the subject well, if a pre-construction water sample at the subject well was taken. North Kent Wind 1 will prepare a written record documenting the results of the well complaint investigation, remediation measures implemented and the results of the post-remediation monitoring. These records shall be retained for the life of the Facility, and will be made available for inspection by the MOECC upon request.

About AECOM

AECOM (NYSE: ACM) is built to deliver a better world. We design, build, finance and operate infrastructure assets for governments, businesses and organizations in more than 150 countries.

As a fully integrated firm, we connect knowledge and experience across our global network of experts to help clients solve their most complex challenges.

From high-performance buildings and infrastructure, to resilient communities and environments, to stable and secure nations, our work is transformative, differentiated and vital. A Fortune 500 firm, AECOM companies had revenue of approximately US\$19 billion during the 12 months ended June 30, 2015.

See how we deliver what others can only imagine at aecom.com and $@\ensuremath{\mathsf{@AECOM}}.$
