Dear Sir or Madam,

With this letter, Enterprise Solar LP would like to update you on the status of the Vulcan Community Solar Project ("Vulcan Solar") (please note: the project is being developed in conjunction with the adjacent Enterprise Solar project and is now part of Enterprise Solar LP). Vulcan Solar has made minor adjustments to the project footprint since it was originally approved by the Alberta Utilities Commission ("AUC") in June 2020 as a 15-megawatt (MW) solar power plant. A time extension for this project was subsequently approved by the AUC on December 23, 2022 (Approval 27793-D04-2022). Project updates that have occurred subsequent to the original AUC approval include:

- The solar panel configuration has changed but it remains within the original project boundary, and required County setbacks continue to be met.
- The entire facility will be fenced for security and safety.
- No glare from the revised project layout is expected.
- Updated noise levels are expected to remain below permissible sound levels.
- Wildlife surveys are current and environmental setbacks have been maintained.

A Letter of Enquiry will be submitted to the AUC in May 2023 to formalize updates made to the project. The current schedule targets construction start in August 2023, and commercial operations start in December 2024.

The AUC Public Involvement Brochure, and a Figure of the Project Area are enclosed for your reference.

We value your feedback. Should you have any questions or comments, please do not hesitate to contact Michael Stafford at (403) 808-5199.

Thank you,

Enterprise Solar LP, by its general partner, Enterprise Solar GP Inc
Andrew Collingwood, Vice President
